PROFESSIONAL SUMMARY

Computer Engineer & AI Architect specializing in local RAG architectures, advanced prompt engineering, and multi-agent workflow automation (n8n). Expert at bridging full-stack applications with privacy-first, open-source AI pipelines to optimize business infrastructure.

EXPERIENCE

Jun 2024 – Present

Freelance Developer & AI Automation Specialist

Self Employed · Remote

- **Privacy-First Local RAG Pipelines:** Built automated Google Drive document analysis and chat retrieval pipelines using **n8n**, **Ollama**, and **Groq**.
- **Multi-Agent Orchestration:** Engineered and deployed advanced LLM frameworks featuring autonomous model-to-model communication.
- **WordPress Architecture Optimization:** Designed responsive Elementor architectures for corporate telecom and tech clients to maximize conversion rates.
- **Shopify UX & Checkout Re-engineering:** Restructured theme UX, collection merchandising, and conversion-focused checkouts for high-traffic e-commerce stores.

Apr 2025 – Sep 2025

Data Analyst

Technoligent (ConnectX) · Islamabad, Pakistan

- Built dynamic inventory tracking in Excel with full ETL-style pipelines.
- Implemented cleaning, transformation, and validation workflows.
- Designed Power BI dashboards for stock levels, trends, and operational visibility.

Feb 2026 – Mar 2026

Operations Executive

InnovoXpress · Remote

- Audited logistics workflows, documented bottlenecks, and proposed automation paths.
- Delivered workflow prototypes and automated internal sheets with Google Apps Script.

May 2024 – Jun 2024

Engineering Intern

National Institute of Electronics(NIE), Islamabad · Islamabad, Pakistan

- Collaborated on FPGA-based chip design using Cadence and Microwind.
- Supported planning and task allocation for hardware design milestones.

EDUCATION

Sep 2020 – Jul 2024

Bachelor of Science in Computer Engineering

Bahria University · Islamabad, Pakistan

PROJECTS

May 2026

Local, Privacy-RAG Chatbot Pipeline with n8n, Ollama, and Groq

Orchestrated RAG Pipeline: Built a privacy-first RAG pipeline using n8n to automatically ingest Google Drive documents and manage persistent multi-turn conversational chat memory.
Vector & Schema Engineering: Configured Ollama (mxbai-embed-large) for local embedding generation, optimizing document chunking strategies and refactoring a Supabase (pgvector) schema for 1024-dimensional compliance.
Edge Inference Optimization: Integrated Llama 3.3 70B via Groq to deliver high-speed, deep-reasoning contextual responses while keeping enterprise data entirely secure on localized infrastructure.
Tech: n8n · Docker · Supabase · Groq api(llama 3.3 versetille) · AI Agent

May 2026

Scalable AI Research Engine

Automated Lead Enrichment Pipeline: Built an asynchronous n8n workflow using Groq (Llama 3.3) to autonomously generate personalized outbound business pitches from raw corporate data.
OAuth2 & Google Cloud Integration: Configured secure Google Cloud APIs (Drive/Sheets) using OAuth2 and custom Apps Script wrappers for automated real-time data triggers.
Rate-Limit Resilience Engineering: Implemented deterministic looping architectures and precision wait-nodes to eliminate 429 errors and maximize free-tier API uptime.
Tech: n8n · Docker · Google Sheets · Groq API

Apr 2026

Portfolio Website

Full-Stack Portfolio Website: Built and deployed a responsive portfolio using Next.js 15, TypeScript, and Tailwind CSS to professionally display technical services, experience, and projects.
GitHub API Data Integration: Integrated the GitHub REST API to dynamically fetch, filter, and render live open-source repositories and contribution metrics directly onto the UI.
Performance & UX Engineering: Implemented hardware-accelerated animations using GSAP, optimizing layout rendering and mobile GPU utilization for seamless user transitions.
Tech: Next.js 15 · TypeScript · Tailwind CSS · vercel · github · cursorAI

Apr 2026

ENRICHING: Autonomous Lead Infrastructure & AI Outreach System

Automated Client Acquisition Engine: Built an end-to-end B2B pipeline to automate startup discovery and client acquisition for IT services globally.
AI Ingestion & Intent Enrichment: Replaced costly data tools by scraping intent signals from LinkedIn and local directories for LLM-driven enrichment.
Multi-Channel Outreach Matrix: Implemented an automated outreach layer to autonomously dispatch personalized campaigns across Email, WhatsApp, and AI Voice Agents.

Tech: vscode · django · calendly · serp api · gmail api · groq api · facebook api · whatsapp api · google sheets

Jan 2023

Inventory Management System (PostgreSQL)

A professional-grade Relational Database Management System (RDBMS) built with PostgreSQL. This project demonstrates advanced database concepts including automated triggers, data integrity, and complex business intelligence reporting.

Tech: PostgreSQL

May 2026

Zenith Tech Rentals - Database System

Relational Database Design: Engineered detailed EER schemas in MySQL Workbench to enforce precise table relationships and business constraints for rental operations.
Cross-Platform Database Migration: Successfully migrated the relational schema and production data from MySQL to PostgreSQL 18 to leverage advanced indexing features.
Production-Ready Implementation: Deployed and verified a fully populated database containing 60+ operational records across structured relational tables.

Tech: PostgreSQL · MySQL

Nov 2025

Financial Analysis Agentic RAG System

Agentic Financial RAG: Built an intelligent financial RAG pipeline using Llama 3.2 90B via Groq for GPU-less AI orchestration.
Multi-Source Ingestion: Integrated real-time data pipelines tracking Yahoo Finance, news, and market filings into live knowledge buffers.
ChromaDB & Colab Optimization: Optimized ChromaDB vector retrieval to run enterprise-grade inference inside CPU-only Google Colab environments.

Tech: python 3.3 · yahooFinance api · news api · chromaDB · Groq Api · Google Colab
